Why ESP | SurgeX

Conserve and Save Energy

Sustainability initiatives, which include protecting the environment, preserving natural resources, and improving energy efficiency are of strategic importance to businesses today. ESP/SurgeX offers a number of solutions that can help you start saving energy today and prepare your organization for connection to future smart grid infrastructure. From our eCommandCenter to our Defender Series, we have a variety of products to help you go green.

Remote Access Control

With ESP/SurgeX energy management solutions, technicians are able to access power anomaly data over the Internet, turn equipment on/off, and resolve power related issues without the need for an onsite service call.

Company Number: BC0994328

Why ESP | SurgeX

Energy Monitoring

Our latest technology enables users to manage and monitor energy consumption of attached equipment. By monitoring energy consumption at the device, department and enterprise level, users can identify opportunities for energy savings. Unfortunately, most people are not aware of the energy consumed by electronic devices that are left on overnight. We can help you manage your energy consumption and reduce your energy footprint.

Project: ESP|SurgeX

Company Number: BC099432

Energy Management

Monitoring energy data is only the first step. Being able to proactively manage energy consumption is where companies can make a real impact. ESP/SurgeX solutions enable users to:

- Automate overnight shut down and morning restart to save energy and increase the life of their critical electronic systems
- Remotely control electronic equipment, turning them off when accidentally left running or monitoring their use to identify problems before the system is jeopardized
- Provide important data on power anomalies and energy usage that can be used to reduce energy consumption, lower environmental impact, and help companies prepare for connection to smart grid infrastructure

A few answers to questions,

1. Turn around time is approximately 3-5 business days
2. A preliminary walk through would be necessary to retrofit equipment. I would get a list of water coolers, coffee makers, vending machines, etc and categorize them by room/ location. Then we can look at the scope of the opportunity and assign nodes, routers, etc..
3. If customers are interested in seeing a live demo, all Julia require is 20 minutes to run through the program. Get a couple dates/ times. Julia and I will make every effort to accommodate.
